

# The Jupiter Science JP104 'Melody' Water Ionizer, Alkalizer, Energizer and Filter

The JP104 is Jupiter's flagship system, with the best of all options at your fingertips.

It has been three years since their last new model, the Mavello and ten years since the release of the Jupiter Masterpiece, its most successful model ever.

The JP104 'Melody' is the best unit in the Jupiter Science stable, packed with features that have evolved from Jupiter Science's experience as the world's longest operating ionizer manufacturer.

The JP104 includes everything one needs for healthy, energized alkaline, antioxidant water.

Like all other models released in 2004, The JP104 has the new BioStone filter, which 'supercharges' output water by increasing its 'wetness' and ability to hold a negative ion charge.

This is achieved by the use of ceramic Tourmaline in the filter, along with embedded coral calcium. The tourmaline emits infrared energy which makes the water far more effective for ionization.

It also means that even water that passes through the filter, but is not ionized, will also have higher absorption, hydration and energy transfer.

Bonus features of the JP104 'Melody' include:

1. 9 settings of pH including superoxide antibacterial water
2. Voice confirmation of output selection
3. Music to warn user of acid output
4. Chime to confirm output readiness and cleansing.
5. Volume control to silence
6. Auto cleanse after each use
7. Ability to attach to mains via 1/4" hole in benchtop
8. 1/4" low profile tap to ionizer tube (others use 3/8" tube)
9. New stylish, smaller diverter valve on tap.
10. Easy to access Coral Calcium receptacle on tap
11. Stainless steel spout
12. Higher output for pH and negative ions
13. Onboard flow control
14. BioStone 5-stage activated 0.01 micron filter
15. Jupiter Science's patented flow control system, ensuring you receive only alkaline out of your alkaline spout and only acid out of your acid hose when you choose alkaline. A Jupiter-only innovation that makes everyday use foolproof.

The JP104 'Melody' is covered by Jupiter Science's two year warranty, and is supported by their exclusive agents in Australia and New Zealand, ION LIFE, Australia and New Zealand's original and most experienced water ionizer suppliers.

Input Voltage	AC110V or 220V
Power Consumption	.5A (110W)
Weight	4.5kg
Dimensions	265 x 145 x 328 mm
Inflow Pressure	.7-5kg/ccm
Inflow temperature	5-30C
Electrolysis method	One Touch Auto Start
Electrolysis Strength	9 settings
Output Water	Max 3 litres/min
Cleaning System	Auto & Manual
Electrode materials	Platinum coated Titanium
Filter Replacement	Click out fit
Filter Life	Approx 9 months
Filter Usage Indicator	LED
Filter Composition	5-stage 0.01 micron
Temperature Control	Auto Shut off
Water Connection	Tap or mains
